

QUADRANT

On November 6th and 7th, 2018, Quadrant exhibited at the Motion Control & Motor Association’s Fall Technical Conference in Louisville, KY. Quadrant also presented a session lead by Mr. Kevin Kurtz, from our engineering department. Kevin’s presentation intitled “Improved Modeling of Surface Degraded Permanent Magnets” focused on surface area / volume ratios related to NdFeB magnets as applications within the permanent magnet industry become increasingly smaller.

Membership in MCMA showcases Quadrant’s high-quality products and services. In addition, it allows us to work “hand in hand” with customers from initial design engineering, material selection, prototype validation through mass production.
