

QUADRANT

Magnetics, Motor & Drive Systems 2019

On January 22nd – 24th, Quadrant Magnetics attended and exhibited at the Magnetics Conference in Orlando, Florida. This conference is co-located with the Motor & Drive Systems conference, making it a well-suited event for Quadrant to roll out our newest material for motors and drives.

At the conference we also showcased for the first time our new booth design, logo and displayed various high-quality permanent magnet products and magnetic assemblies to the attendees. It was also a great opportunity to engage with our current and prospective customers.

In addition to exhibiting, Scott Tubbs, V.P. of Sales & Marketing participated in a panel discussion that focused on Magnetic Technology Trends & Applications. Scott presentation focused on surface area to volume ratios along with metal injection molded technologies for permanent magnets.
